

COMPUTER IN THE HEAD

MASTER SET-UP PANEL

PERFECT REGISTRATION USING SPATIAL ERROR CORRECTION

The BCC-20 Digicam Edge. An EFP Camera that's 100% Ampex.

The best of Ampex technology has been designed into our computer controlled EFP camera. Built by Ampex in our new California facilities, the Digicam was designed to produce the highest quality picture both on location and in the studio.

A Computer in a Portable Head.
The BCC-20 Digicam's computer-in-the-head technology combines a microprocessor and digital memory with a powerful software program to give you full-time digital control of the camera.

Even with the power turned off, the Digicam's memory-in-the-head stores the operating parameters.

New to Camera Technology.
Unique with Digicam is Spatial Error Correction, which can achieve 0.05% registration in any of 182 zones of the picture. Using the Spatial Error Correction Cursor

System, you can zero-in on any area of the picture and correct an error in seconds.

The Spatial Error Correction System allows the operator to easily overcome difficult distortions such as "bowing", "S" distortion and off-axis corner registration errors and quickly achieve perfect registration.

The MSP. Total Control Manually or Automatically.

The MSP (Master Set-Up Panel) is the control terminal for the Digicam System. It controls manual set-up of the Digicam, or automatic set-up when the ASU (Automatic Set-Up Unit) is used.

With the MSP and the ASU in use you can set-up as many as 8 cameras in far less time and with better results than a single, conventional camera.

In the self-contained mode, the Digicam head memory permits the MSP

to be disconnected for true portable operation. And yet the operator can still use thumbwheel selector switches inside the camera head to make any operational last minute adjustments.

You'll find the Digicam by Ampex to be the most advanced portable camera available today. Call your Ampex representative and tell him you're ready for the Digicam edge!
