

The whole family is cool  
brilliant  
and thrifty

## The NEW Marconi Mk IX Colour Camera

The Marconi Mark IX concept introduces a family of advanced colour cameras covering every aspect of production needs. Two basic cameras with a range of options and configurations to suit any application.

They're cool. They use only half the power of their predecessors, generate much less heat. Control units have been reduced to half the size. Cameras are lighter, smaller and more agile. Performance is superb – in the studio, on the set, with the OB vehicle, at sports meetings, hand-held – anywhere. A Triax option enables you to operate up to 1½ kilometres from the compact base unit.

New, cost-effective Marconi Mark IX. The shape of colour television for years ahead.
